

BENGALURU NORTH UNIVERSITY
KOLAR - 563103

State Education Policy - 2024
(Semester Scheme)

Curriculum Structure for Bachelor of Computer Applications
(BCA)

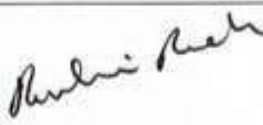

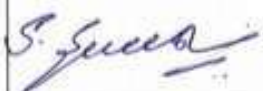

Syllabus for 3rd and 4th Semesters

With Effect From

Academic Year 2024 - 2025 and onwards

Curriculum Design/Syllabus Framing Committee

The following BOS members were present:

Sl.No.	Name and Address	Designation	Signature
1.	Dr. Murugan K, Associate Professor Department of Computer Science Government First Grade College K R Puram, Bengaluru-560036.	Chairperson	
2	Smt. Rashmi Rao K, Associate Professor Department of Computer Science Government First Grade College Hoskote, Bengaluru (Rural)	Member	
3	Dr. Sumanth S, Associate Professor Department of Computer Science Government College for Women Kolar – 563101	Member	
4	Dr. Rajendirakumar S, Associate Professor Department of Computer Science Government College for Women Kolar – 563101	Member	
5	Dr. Hamela K, Associate Professor Department of Computer Science Government First Grade College Malur, Kolar (Dist)	Member	
6	Mr. Manikandan S, Associate Professor Department of Computer Science Government First Grade College K. R. Puram, Bengaluru	Member	
7	Dr. K. S. Manjunatha, Professor Department of Computer Science, Maharanis Science College for Women JLB Road, Mysore.	Member (External)	

Minutes:

1. The BoS members have approved the course structure and recommended (Theory and Lab).
2. The BoS members unanimously approved the proposed course structure for the newly introduced subjects.
3. The BoS members are accepted the detailed syllabi for the 3rd & 4th Semester

**Regulations, Scheme of study and Examination for BCA Degree Course under
Choice Based Credit System - Semester System (SEP Scheme)
(With effect from 2024 -2025)**

R1. a) Title of the course: **Bachelor of Computer Applications**

b) Duration of the Course: Durations of the undergraduate programme shall extend SIX semesters (Three academic years) for the regular Bachelor Degree.

c) Scheme of study: there shall be six theory papers and two practical from first semester to five semesters.

d) There will be four theory, one practical and one project/Internship in sixth semester. The project work shall be carried out either independently or jointly (maximum of three students)

e) Medium of Instruction: The medium of instruction shall be English.

f) Scheme of Examination: At the end of each semester there is University Examination of three hours duration in each of the theory paper/practical.

R2. Each semester shall be of 90 working days from the date of commencement of the each Semester.

R3. Attendance: As per Bengaluru North University regulations in force for science degree courses.

R4. A Candidate is allowed to carry over all the previous uncleared (failed) theory papers/Practical to subsequent semesters as per Bengaluru North University regulations in force for science degree courses.

R5. The maximum period for completion of the course shall be as per Bengaluru North University regulations in force for science degree courses.

R6. Eligibility for admission:

a) A candidate who has passed the two years Pre-University Examination conducted by the Pre-University Education Board in Karnataka a minimum of 35% of marks.

b) A candidate who has passed Three years Diploma in Engineering of Government of Karnataka or any other examination considered as equivalent thereto shall be eligible for admission with minimum of 35% of marks in aggregate in all the semester /years.

c) Any student who has passed PUC –II Science, Arts or Commerce other than Karnataka securing with a minimum of 35% of marks.

R8. The total number of students to be admitted to the course shall be decided by the Bengaluru North University.

R9. Results: Results of candidate shall be declared and the classes awarded as per the procedure followed by the Bengaluru North University.

R10. Power to Remove Difficulties:

a) If any difficulty arises in giving effect to the provisions of these regulations, the Vice-Chancellor may be order make such provisions not inconsistent with the Act, Statutes, Ordinances or other Regulations, as appears to be necessary to expedient to remove the difficulty.

b) Every order made under this shall be subject to rectification by the appropriate University Authorities.

R11. The question paper pattern for theory paper has three sections. (80 Marks)

1. Section A includes 12 questions, students has to attend 10 questions. Each carries 2 Marks ($10 * 2 = 20$)
2. Section B includes 8 questions (question may contain sub questions), students has to attend 6 questions. each carries 5 Marks ($6 * 5 = 30$)
3. Section C includes 4 questions (question may contain sub questions), students has to attend 3 questions. each carries 10 Marks ($3 * 10 = 30$)

R12. Internal Assessment Scheme for Theory (4 Credits).

Assessment Criteria	Marks
Two test (Each carries 5 marks)	10
Assignment	5
Seminar	5
Total	20

R13. Internal Assessment Scheme for Theory (2 Credits).

Assessment Criteria	Marks
Test	5
Assignment	5
Total	10

R14. Internal Assessment Scheme for Practical (2 Credits).

Assessment Criteria	Marks
Test	5
Record	5
Total	10

R15. Evaluation Scheme for Practical Examination (SEE).

Assessment Criteria	Marks
Write up two programs (one from Section-A and Section-B)	20
Execution and output	15
Viva Voice based on Lab Activities	5
Total	40

Course Content for Bachelor of Computer Applications (BCA)

Curriculum Structure							
Program: BCA				Subject: Computer Applications			
Semester	Course Code	Title of the Paper	Credits (L+P)	No. of Teaching Hours / Per Week	Marks		Total Credits

Semester: III

CA3T1: Object Oriented Concepts using JAVA

Course Code: CA3T1	Course Title: Object Oriented Concepts using JAVA
Course Credits: 04	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 20 Marks	Semester End Exam: 80 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Understand the features of Java and the architecture of JVM.
CO2	Write, compile, and execute Java programs that may include basic data types and control flow constructs and how type casting is done
CO3	Identify classes, objects, members of a class and relationships among them needed for a specific problem and demonstrate the concepts of polymorphism and inheritance.
CO4	To demonstrate programs based on interfaces and threads, Explain the benefits of Java exceptional handling mechanism.
CO5	Write, compile, execute Java programs that include GUIs and event driven programming and also programs based on files

Course Content	Hours
Unit-I	15
Introduction to Java: Java History, Java Features, How Java differs from C, Java and Internet, Java and World Wide Web, Web Browsers, Hardware and Software Requirements, Java Support Systems, Java Environment. Overview of Java Language: Introduction, Structure of Java program, Implementing a Java Program, Java Virtual Machine, Command Line Arguments, Programming Style. Constants, Variables, and Data Types: Introduction, Tokens, Constants, Variables, Data Types, Declaration of Variables, Giving Values to Variables, Scope of Variables, Symbolic Constants, Type Conversions, Getting Values of Variables, Standard Default Values, Operators and Expressions: Introduction, Arithmetic Operators, Relational Operators, Logical Operators, Assignment Operators, Increment and Decrement Operators, Conditional Operators, Bitwise Operators, Special Operators, Arithmetic Expressions, Evaluation of Expressions, Precedence of Arithmetic Operators, Associativity, Mathematical Functions. Decision making and branching: if and switch statements, Decision making and looping: The while, do while and for loops, Jumps in Loops Labeled Loops.	
Unit-II	15
Classes, Objects and Methods: Introduction, Defining a Class, Adding Variables, Adding Methods, Creating Objects, Accessing Class Members, Constructors, Methods Overloading, Static Members, Nesting of Methods, Inheritance: Extending a Class, Types of inheritance, Overriding Methods, Final Variables and Methods, Finalizer methods, Abstract Methods and Classes, Visibility Control. Arrays, Strings and Vectors: Arrays, One-dimensional Arrays, Creating an Array, Two -Dimensional Arrays, Creating an Array, Two – dimensional Arrays, Strings, Vectors, Wrapper Classes.	
Unit-III	15
Interfaces: Introduction, Defining Interfaces, Extending Interfaces, Implementing Interfaces, Accessing Interface Variables. Packages: Putting Classes together: Introduction, Java API Packages, Using System Packages, Naming Conventions, Creating Packages, Accessing a	

Package, Using a Package, Adding a Class to a Package, Hiding Classes. Multithreaded Programming: Introduction, Creating Threads, Extending the Thread Class, Stopping and Blocking a thread, Life Cycle of a thread, Using Thread Methods, Thread Exceptions, Thread Priority, Synchronization, Implementing the 'Runnable' Interface. Managing Errors and Exception: Introduction, Types of Exception Handling Code, Multiple Catch Statements, Using Finally Statement, Throwing Our Own Exceptions, Using Exceptions for Debugging.

Unit-IV

15

Applet Programming: Introduction, How Applets Differ from Applications, Preparing to Write Applets, Building Applet Code, Applet Life Cycle, Creating an Executable applet, Designing a Web Page, Applet Tag, Adding Applet to HTML File, running the Applet, More About HTML Tags, Displaying Numerical Values, Getting Input from the User. Graphics programming: Introduction, The Graphics Class, Lines and rectangles, circles, and Ellipses, Drawing Arcs, Drawing Polygons, Lines Graphs, Using Control Loops in Applets, Drawing Bar Charts. Managing Input/Output Files in Java: Introduction, Concept of Streams, Stream Classes, Byte Stream Classes, Character Stream Classes, Using Streams, Other Useful I/O Classes, Using the File Class, Input / Output Exceptions, Creation of Files, Reading / Writing Characters, Reading / Writing Bytes, Handling Primitive Data Types, Concatenating and Buffering Files, Interactive Input and output, Other Stream Classes.

CA3T2: Database Management Systems

Course Code: CA3T3	Course Title: Database Management Systems
Course Credits: 04	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 20 Marks	Semester End Exam: 80 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Explain the various database concepts and the need for database systems.
CO2	Identify and define database objects, enforce integrity constraints on a database using DBMS.
CO3	Demonstrate a Data model and Schemas in RDBMS.
CO4	Identify entities and relationships and draw ER diagram for a given real-world problem.
CO5	Convert an ER diagram to a database schema and deduce it to the desired normal form.
CO6	Formulate queries in Relational Algebra, Structured Query Language, (SQL) for database manipulation.
CO7	Explain the transaction processing and concurrency control techniques

Course Content	Hours
Unit-I	15
Introduction to Databases: Database, Characteristics of database approach. Database users. Data models. Database schema. Database architecture. Data independence, interfaces, and classification of DBMS. Advantages of using DBMS. E-R Model: Entity-Relationship model: E-R Model Concepts: Entity, Entity types, Entity sets, Attributes, Types of attributes, key attribute, and domain of an attribute. Relationships between the entities. Relationship types, roles and structural constraints, degree and cardinality ratio of a relationship. Weak entity types, E -R diagram.	
Unit-II	15
Relational Data Model: Relational model concepts, characteristics of relations. Relational model constraints, Domain constraints, key constraints, primary and foreign key constraints, integrity constraints and null values. SQL: Introduction to SQL, Data types, Types of database languages, DDL, DML, DCL, TCL, Aggregate functions, grouping, nested sub queries, views.	
Unit-III	15
Relational Algebra: Basic Relational Algebra operations. Set theoretical operations on relations, Join Operation. Data Normalization: Anomalies in relational database design. Decomposition. Functional dependencies. Types of normal form, first, second and third normal form. Boyce-Codd normal form. PL/SQL, Introduction, Data types, Syntax of PL/SQL, Variables, Constants, Operators, If and Case statements, Looping, Exception handling, Cursors, Functions, Packages.	
Unit-IV	15
Query Processing Transaction Management: Introduction Transaction Processing. Single user & multiuser systems. Transactions: read & write operations. Need of concurrency control: The lost update problem, Dirty read problem. Types of failures. Transaction states. Desirable properties (ACID properties) of Transactions. Concurrency Control Techniques: Locks and Time stamp Ordering. Deadlock & Starvation.

CA3T3: Design and Analysis of Algorithms

Course Code: CA3T3	Course Title: Design and Analysis of Algorithms
Course Credits: 04	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 20 Marks	Semester End Exam: 80 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Understand the fundamental concepts of algorithms and their complexity, including time and space complexity, worst-case and average-case analysis, and Big-O notation.
-----	--

CO2	Design algorithms for solving various types of problems, such as Sorting, Searching, Graph traversal, Decrease-and-Conquer, Divide-and-Conquer and Greedy Techniques.
CO3	Analyze and compare the time and space complexity of algorithms with other algorithmic techniques.
CO4	Evaluate the performance of Sorting, Searching, Graph traversal, Decrease-and-Conquer, Divide-and-Conquer and Greedy Techniques using empirical testing and benchmarking, and identify their limitations and potential improvements.
CO5	Apply various algorithm design to real-world problems and evaluate their effectiveness and efficiency in solving them.

Course Content	Hours
Unit-I	15
Introduction: What is an Algorithm? Fundamentals of Algorithmic problem solving, Fundamentals of the Analysis of Algorithm Efficiency, Analysis Framework, Measuring the input size, Units for measuring Running time, Orders of Growth, Worst-case, Bestcase and Average-case efficiencies. Asymptotic Notations and Basic Efficiency classes, Informal Introduction, O-notation, Ω -notation, θ -notation, mathematical analysis of non-recursive algorithms, mathematical analysis of recursive algorithms.	
Unit-II	15
Brute Force & Exhaustive Search: Introduction to Brute Force approach, Selection Sort and Bubble Sort, Sequential search, Exhaustive Search- Travelling Salesman Problem and Knapsack Problem, Depth First Search, Breadth First Search.	
Unit-III	15
Decrease-and-Conquer: Introduction, Insertion Sort, Topological Sorting Divide-and-Conquer: Introduction, Merge Sort, Quick Sort, Binary Search, Binary Tree traversals and related properties.	
Unit-IV	15
Greedy Technique: Introduction, Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm, Lower-Bound Arguments, Decision Trees, P Problems, NP Problems, NP Complete Problems, Challenges of Numerical Algorithms.

CA3P1: Java Programming Lab

Course Code: CA3P1	Course Title: Java Programming Lab
Course Credits: 02	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

Section - A

1. Write a program to find factorial of list of number reading input as command line argument.
2. Write a program to display all prime numbers between two limits.

3. Write a program to sort list of elements in ascending and descending order and show the exception handling.
4. Write a program to implement all string operations.
5. Write a program to find area of geometrical figures using method.
6. Write a program to implement constructor overloading by passing different number of parameter of different types.
7. Write a program to create student report using applet, read the input using text boxes and display the o/p using buttons.
8. Write a program to calculate bonus for different departments using method overriding.
9. Write a program to implement thread, applets and graphics by implementing animation of ball moving.
10. Write a program to implement mouse events and keyboard events

Section - B

11. Write a java program to demonstrate the usage of switch case statement.
12. Program to print first N Fibonacci numbers.
13. Write a program to find product of two matrices.
14. Write a program to accept N string and sort in ascending order.
15. Program to demonstrate the usage of classes and objects.
16. Program to implement the concepts of multiple inheritance.
17. Write a program to demonstrate the concepts of multithreaded programming.
18. Write an applet program to find the sum of two integers using user input.
19. Write an applet program to draw human face.
20. Write an applet program to create Bar Charts.

CA3P2: DBMS Lab

Course Code: CA3P2	Course Title: DBMS Lab
Course Credits: 02	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

Section-A

1. Execute a single line query and group functions.
2. Execute DDL Commands.
3. Execute DML Commands
4. Execute DCL and TCL Commands.
5. Implement the Nested Queries.
6. Implement Join operations in SQL

Section-B

7. Create views for a particular table
8. Implement Locks for a particular table
9. Write PL/SQL procedure for an application using exception handling.
10. Write PL/SQL procedure for an application using cursors.
11. Write a PL/SQL procedure for an application using functions
12. Write a PL/SQL procedure for an application using package

SEC1: Shell Programming Lab

Course Code: SEC1	Course Title: Shell Programming Lab
Course Credits: 02	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

General Guidelines for Offering Skill Enhancement Course in BCA General, BCA (Data Science) and B.Sc. (Artificial Intelligence) Degree

1. SEC practical classes shall be conducted using the same operational framework as regular BCA/BCA(DS)/B.Sc. (AI) practical sessions with 0+0+2 credits for 0+0+4 practical hours per week requiring minimum of 60 practical Lab hours per subject per semester.
2. The guidelines issued by the Department of Collegiate Education (DCE) can be followed for making students batches for SEC practical for calculating corresponding workload for faculty.
 - If the student strength is less than or equal to 19, a single faculty with 4 hours of workload can be assigned.
 - If the student's strength is 20 to 30, two faculties can be assigned with 8 hours of practical workload.
 - When student strength exceeds more than 30, practical classes may be conducted in parallel laboratories in the same semester.
 - Internal Assessment (IA) scheme and Semester End Exam (SEE) to be followed as per regular practical examination.

List of Experiments

Section – A

1. To demonstrate the usage of any five internal commands.
2. To demonstrate the usage of any five external commands.
3. Write a shell script to calculate simple interest.
4. To print all prime numbers between m and (m<n).
5. Write a shell script to reverse a given number and check whether it is palindrome or not.

6. Write a shell script to find maximum and minimum of given set.
7. Write a shell script to generate and print the GCD and LCM of two integers.
8. Write a shell script to count lines, words and characters in its input. (do not use wc)
9. Write a shell script that displays the list of all files in the given directory.
10. Write a shell script to display files which has read, write and execute permissions

Section – B

11. Write a shell script to check given year is Leap year or not.
12. Write a shell script to make a basic calculator which performs addition, subtraction, Multiplication, division.
13. Write a shell script to count number of positive, negative and zero in a given set of numbers.
14. Write a shell script to input angles of a triangle and find out whether it is valid triangle or not.
15. Write a shell script to find factorial of given number.
16. Write a shell script to generate a multiplication table of the given number
17. Write a shell script to count number of digits and print sum of digit of any integer number.
18. Write a shell script to display Fibonacci series of n numbers.
19. Write a shell script to find reverse of a given string.
20. Write a shell script to check given string is palindrome or not.

DSE1: Internet of Things

Course Code: DSE1	Course Title: Internet of Things
Course Credits: 02	Teaching Hours/Week: 02
Total Contact Hours: 30	Exam Duration : 1 ½ Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Understand the various concepts and architecture of IoT systems.
CO2	Understand various applications of IoT.
CO3	Use sensors and actuators for design of IoT.
CO4	Use various techniques of data storage and analytics in IoT.

Course Content	Hours
Unit-I	10
Introduction: Features of IoT, Characteristics of IoT, Architecture, Role of cloud in IoT, Applications of IoT: Home Automation, Smart Cities, Energy, Retail Management, Logistics, Agriculture, Health and Lifestyle, Industrial IoT, Legal challenges, IoT design Ethics, IoT in Environmental Protection.	
Unit-II	10
Sensing and Actuation: Definition of Sensor, Sensor features, Resolution, Classes, Different types of sensors, Actuator, Different types of Actuators, purpose of Sensors and Actuators in IoT	

Unit-III	10
IoT Application Development: Frame work for IoT Applications-Implementation of Device integration, Data acquisition and Integration, Device data storage on cloud/local server, Authentication, authorization of Devices.

DSE1: Cloud Computing

Course Code: DSE1	Course Title: Cloud Computing
Course Credits: 02	Teaching Hours/Week: 02
Total Contact Hours: 30	Exam Duration : 1 ½ Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	To understand the principles of cloud architecture, models and infrastructure.
CO2	To gain knowledge about virtualization Infrastructure.
CO3	To explore and experiment with various Cloud deployment environments.
CO4	To learn about the security issues in the cloud environment.

Course Content	Hours
Unit-I	10
Cloud Computing Foundation : Introduction to Cloud Computing – Move to Cloud Computing – Types of Cloud – Working of Cloud Computing.	
Unit-II	10
Cloud Computing Architecture : Cloud Computing Technology – Cloud Architecture – Cloud Modeling and Design - Virtualization : Foundation – Grid, Cloud and Virtualization – Virtualization and Cloud Computing.	
Unit-III	10
Data Storage and Cloud Computing : Data Storage – Cloud Storage – Cloud Storage from LANs to WANs – Cloud Computing Services : Cloud Services – Cloud Computing at Work – Cloud Security : Data Security – Cloud Applications.

Semester: IV

CA4T1: Python Programming

Course Code: CA4T1	Course Title: Python Programming
Course Credits: 04	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 20 Marks	Semester End Exam: 80 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Explain the basic concepts of Python Programming.
CO2	Demonstrate proficiency in the handling of loops and creation of functions.
CO3	Identify the methods to create and manipulate lists, tuples and dictionaries.
CO4	Discover the commonly used operations involving file handling.
CO5	Interpret the concepts of Object-Oriented Programming as used in Python.
CO6	Develop the emerging applications of relevant fields using Python

Course Content	Hours
Unit-I	15
Introduction to Python: Features of Python - How to Run Python - Identifiers - Reserved Keywords - Variables - Comments in Python - Indentation in Python - Multi-Line Statements - Multiple Statement Group (Suite) - Quotes in Python - Input, Output and Import Functions - Operators. Data Types and Operations: Numbers – Strings – List – Tuple – Set – Dictionary – Data type conversion. Python Control Flow: Types of Control Flow; Control Flow Statements- if, else, elif, while loop, break, continue statements, for loop Statement; range () and exit () functions.	
Unit-II	15
Exception Handling: Types of Errors; Exceptions; Exception Handling using try, except and finally. Python Functions: Types of Functions; Function Definition- Syntax, Function Calling, Passing Parameters/arguments, the return statement; Default Parameters; Command line Arguments; Key Word Arguments; Recursive Functions; Scope and Lifetime of Variables in Functions. Strings: Creating and Storing Strings; Accessing Sting Characters; the str() function; Operations on Strings- Concatenation, Comparison, Slicing and Joining, Traversing; Format Specifiers; Escape Sequences; Raw and Unicode Strings; Python String Methods.	
Unit-III	15
File Handling: File Types; Operations on Files– Create, Open, Read, Write, Close Files; File Names and Paths; Format Operator. Object Oriented Programming: Classes and Objects; Creating Classes and Objects; Constructor Method; Classes with Multiple Objects; Objects as Arguments; Objects as Return Values; Inheritance- Single and Multiple Inheritance, Multilevel and Multipath Inheritance; Encapsulation- Definition, Private Instance Variables; Polymorphism- Definition, Operator Overloading.	
Unit-IV	15
GU Interface: The tkinter Module; Window and Widgets; Layout Management- pack, grid and place. Python SQLite: The SQLite3 module; SQLite Methods- connect, cursor, execute, close; Connect to Database; Create Table; Operations on Tables- Insert, Select, Update. Delete and Drop Records. Data Analysis: NumPy- Introduction to NumPy, Array Creation	

using NumPy, Operations on Arrays; Pandas- Introduction to Pandas, Series and Data Frames, Creating Data Frames from Excel Sheet and .csv file, Dictionary and Tuples. Operations on Data Frames. Data Visualisation: Introduction to Data Visualisation; Matplotlib Library; Different Types of Charts using Pyplot- Line chart, Bar chart and Histogram and Pie chart.

CA4T2: Artificial Intelligence & Applications

Course Code: CA4T2	Course Title: Artificial Intelligence & Applications
Course Credits: 04	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 20 Marks	Semester End Exam: 80 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Gain a historical perspective of AI and its foundations
CO2	Become familiar with basic principles of AI toward problem solving.
CO3	Get to know approaches of inference, perception, knowledge representation, and learning.
CO4	Understand the concepts of learning and neural networks.

Course Content	Hours
Unit-I	15
Introduction- What is Artificial Intelligence, Foundations of AI, History, AI - Past, Present and Future. Intelligent Agents- Environments- Specifying the task environment, Properties of task environments, Agent based programs-Structure of Agents , Types of agents- Simple reflex agents, Model-based reflex agents, Goal-based agents; and Utility-based agents.	
Unit-II	15
Problem Solving by Searching-Problem-Solving Agents, Well-defined problems and solutions, examples Problems, Searching for Solutions, Uninformed Search Strategies- Breadth-first search, Uniform-cost search, Depth-first search, Depth-limited search, Iterative deepening depth-first search, Bidirectional search, Greedy best-first search, A* Search, AO* search Informed (Heuristic) Search Strategies, Heuristic Functions	
Unit-III	15
Knowledge Representation - Knowledge-Based Agents, The Wumpus World , Logic, Propositional Logic, Propositional Theorem Proving, Effective Propositional Model Checking, Agents Based on Propositional Logic, First-Order Logic-Syntax and Semantics of First-Order Logic, Using First-Order Logic, Unification and Lifting Forward Chaining, Backward Chaining	
Unit-IV	15
Learning– Forms of Learning, Supervised Learning, Machine Learning - Decision Trees,	

Regression and Classification with Linear Models, Artificial Neural Networks, Support Vector Machines

CA4T3: Computer Networks

Course Code: CA4T3	Course Title: Computer Networks
Course Credits: 04	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 20 Marks	Semester End Exam: 80 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Define various data communication components in networking. Describe networking with reference to different types of models and topologies.
CO2	Explain various Data Communications media. Describe the physical layer functions and components
CO3	Describe various Data link Layer Protocols.
CO4	Identify the different types of network devices and their functions within a network.
CO5	Analyze and Interpret various Data Link Layer and Transport Layer protocols.
CO6	Explain different application layer protocols

Course Content	Hours
Unit-I	15
Introduction: Computer Network, Uses of Computer Networks, Network hardware, Network software, OSI Reference Models, TCP/IP Reference models. Physical Layer: Guided Transmission media, Wireless transmission, Communication Satellites, Digital Modulation and Multiplexing.	
Unit-II	15
Data link layer: Design issues: framing, Error detection and correction. Elementary data link protocols: simplex protocol, A simplex stop and wait protocol for an error-free channel, A simplex stop and wait protocol for noisy channel. Sliding Window protocols: A one-bit sliding window protocol, A protocol using Go-Back-N, A protocol using Selective Repeat. Medium Access sub layer: ALOHA, CSMA, CSMA/CD, CSMA/CA, Wireless LANs, Data link layer switching.	
Unit-III	15
Network Layer: Design issues, Routing algorithms: shortest path routing, Flooding, Hierarchical routing, Broadcast, Multicast, distance vector routing, Congestion Control Algorithms, Quality of Service, Internetworking, The Network layer in the internet.	
Unit-IV	15
Transport Layer: Transport Services, Elements of Transport protocols, Connection management, TCP and UDP protocols. Application Layer: Domain name system, SNMP, Electronic Mail; the World Wide Web, HTTP, Streaming audio and video.

CA4P1: Python Programming Lab

Course Code: CA4P1	Course Title: Python Programming Lab
Course Credits: 02	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

Section-A

1. Write simple Python program to display message on screen
2. Write simple Python program using operators:
 - a) Arithmetic Operators
 - b) Logical Operators
 - c) Bitwise Operators
3. Write a Python program to create a calculator program.
4. Write simple Python program to demonstrate use of conditional statements:
 - a) if statement
 - b) if ... else statement
 - c) Nested if statement
5. Write python program to demonstrate use of looping statements:
 - a) while loop
 - b) for loop
 - c) Nested loops
6. Write python program to perform following operations on Lists:
 - a) Create list
 - b) Access list
 - c) Update list (Add item, Remove item)
 - d) Delete list
7. Write python program to perform following operations on Tuples:
 - a) Create Tuple
 - b) Access Tuple
 - c) Update Tuple
 - d) Delete Tuple
8. Write python program to perform following operations on Tuples:
 - a) Create Set
 - b) Access Set elements
 - c) Update Set
 - d) Delete Set
9. Write python program to perform following operations on Dictionaries:
 - a) Create Dictionary
 - b) Access Dictionary elements
 - c) Update Dictionary
 - d) Delete Set
10. Write Python program to demonstrate math built- in functions

Section-B

11. Write Python program to demonstrate string built — in functions _
12. Develop user defined Python function for given problem:
 - a) Function with minimum 2 arguments
 - b) Function returning values
13. Write a program in Python to demonstrate following operations:
 - a) Method overloading
 - b) Method overriding
14. Write a program in Python to demonstrate following operations:
 - a) Simple inheritance
 - b) Multiple inheritance
15. Write a program in Python to handle user defined exception.
16. Create a GUI using Tkinter module.
17. Drawing Line chart and Bar chart using Matplotlib.
18. Drawing Histogram and Pie chart using Matplotlib.
19. Create Array using NumPy and Perform Operations on Array.
20. Create Data Frame from Excel sheet using Pandas and Perform Operations on Data Frames.

CA4P2: Artificial Intelligence Lab using Python

Course Code: CA4P2	Course Title: Artificial Intelligence Lab using Python
Course Credits: 02	Teaching Hours/Week: 04
Total Contact Hours: 60	Exam Duration : 3 Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

Section – A

1. Demonstrate the various python libraries used for machine learning.
2. Write a program to implement Breadth First Search.
3. Write a program to implement Depth First Search.
4. Write a program to implement A* Search algorithm.
5. Write a program to implement AO* Search algorithm.
6. Write a Program to implement Tic-Tac-Toe game.
7. Write a Program to implement 8-Puzzle problem.
8. Write a Program to implement Water-Jug problem.

Section – B

9. Write a Program to implement Travelling Salesman Problem.
10. Write a Program to implement Monkey Banana Problem.
11. Write a Program to implement Alpha-Beta Pruning.
12. Write a Program to implement 8-Queens Problem.
13. Write a Program to implement Missionaries-Cannibals Problems
14. Write a Program to implement Hill Climbing Algorithm.
15. Write a Program to implement Forward Chaining algorithm.
16. Write a Program to implement FOPL related problems.

DSE2: Fundamentals of Data Science

Course Code: DSE2	Course Title: Fundamentals of Data Science
Course Credits: 02	Teaching Hours/Week: 02
Total Contact Hours: 30	Exam Duration : 1 ½ Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Understand the concepts of data and preprocessing of data.
CO2	Know simple pattern recognition methods
CO3	Understand the basic concepts of Clustering and Classification
CO4	Know the recent trends in Data Science.

Course Content	Hours
Unit-I	10
Data Mining: Introduction, Data Mining Definitions, Knowledge Discovery in Databases Vs Data Mining, DBMS Vs Data Mining, DM techniques, Problems, Issues and Challenges in DM, DM applications.	
Unit-II	10
Data Warehouse: Introduction, Definition, Multidimensional Data Model, Data Cleaning, Data Integration and transformation, Data reduction, Discretization.	
Unit-III	10
Mining Frequent Patterns: Basic Concept – Frequent Item Set Mining Methods -Apriori and Frequent Pattern Growth algorithms -Mining Association Rules. Mining Frequent Patterns:	

Basic Concept – Frequent Item Set Mining Methods - Apriori and Frequent Pattern Growth algorithms -Mining Association Rules.

DSE2: Machine Learning

Course Code: DSE2	Course Title: Machine Learning
Course Credits: 02	Teaching Hours/Week: 02
Total Contact Hours: 30	Exam Duration : 1.30 Hours
Internal Assessment : 10 Marks	Semester End Exam: 40 Marks

Course Outcomes (COs): After the successful completion of the course, the student will be able to:

CO1	Understand the basic theory underlying machine learning.
CO2	Understand the features of machine learning to apply on real world problems
CO3	Characterize the machine learning algorithms as supervised learning and unsupervised learning
CO4	Learn the concepts in Bayesian analysis from probability models and methods

Course Content	Hours
Unit-I	10
Introduction to Machine Learning: Introduction, Perspectives & Issues in ML, designing learning systems, Concepts of hypotheses, Version space, inductive bias, Performance metrics-accuracy, precision, recall, sensitivity, specificity, AUC, RoC.	
Unit-II	10
Supervised Learning: Decision Trees Learning: Basic algorithm (ID3), Issues in Decision Tree Learning—Overfitting, Solutions to overfitting. Instance-based learning: k-nearest neighbour learning. Support Vector Machines: Introduction, Handling data that are linearly separable. Artificial Neural networks: Introduction, Perceptrons, Multi-layer networks and back-propagation.	
Unit-III	10
Probabilistic and Stochastic Models: Bayesian Learning—Bayes theorem, Concept learning, Maximum likelihood, Bayes optimal classifier, Naive Bayes classifier. Expectation Maximization and Gaussian Mixture Models, Hidden Markov models.
